

NoaCG SVG examples

Seven broadcast graphics drawn in Illustrator: a title, a lower third, a quiz, a scoreboard, a countdown, a ticker and end credits. Open one, see how its layers are named, make it yours, and run it live in NoaCG.

What is in the folder

- **Illustrator:** the seven files you open and change.
- **SVG:** the same seven, saved for NoaCG. Import these first to see how it works.
- **Previews:** a picture of every graphic, and of every moment the quiz, the scoreboard and the countdown can show.

Open, edit, export, import

- Open a file from the Illustrator folder, and open the Layers panel (Window > Layers).
- Look at the layers: Text, Moments and Board. The next page says what each one holds.
- Change the colours, fonts, shapes and words as much as you like. Keep the layer names.
- Pink text in Illustrator means the font is missing. Install Oswald from fonts.google.com, or pick another font.
- Save for NoaCG: File > Save a Copy > SVG. Tick "Use Artboards". In SVG Options, keep Font on SVG and press OK.
- Go to noacg.studio/app, press New graphic, then Import graphic, and drop in your SVG. NoaCG finds the fields and the moments from the layer names.
- Put the graphics you need in one production, and run the show from the production's page.

On air

- **Title:** type the Title and Subtitle. Take, then Out.
- **Lower third:** one graphic for everybody. Type the Name and Role and press Take. Type the next person and press Update.
- **Quiz:** type the question and four answers, pick the correct one, Take. When a player answers, pick their letter, then press Select answer, Lock it in and Reveal correct.
- **Scoreboard:** type both team names. +1 and -1 change the score, and a point flashes that team's tab.
- **Countdown:** the Clock field is the length in minutes, 5 from the 05:00 drawn in the file. Take, and it counts down. Pause holds it, Start goes on, and Reset puts it back to the top.
- **Ticker:** type the Kicker and the Story. Update changes the line on air.
- **End credits:** the whole list is one field. A line ending in ":" is a title, and the names go under it. An empty line starts a new part. Take, and it rolls.

The names in the examples are made up.

Layer names

NoaCG reads the names in the Layers panel, so every graphic uses the same three layers. From the top:

- **Text** is what you type on air. Name each text for what it is.
- **Moments** are what NoaCG shows or moves. A moment is a hidden group; a bar is drawn at full length and left visible. A graphic with no moments has no Moments layer.
- **Board** stays as drawn. Panel is the background. A plate under a text is that text's name plus "box". Fixed words start with `static:`. Any other shape can have any name.

A letter or a number after a space says which row a name belongs to: Answer A, Score 1. Every name is in English.

Graphic	Text	Moments	Board
Title	Title, Subtitle	none	Panel, Title box, Subtitle box
Lower third	Name, Role	none	Panel, and Accent, a decoration
Quiz	Question, Answer A to Answer D	Selected A, Correct A, Wrong A for each letter, and one Locked in	Question box, and Answer box A, Letter box A and <code>static:Letter A</code> for each letter
Scoreboard	Team 1, Score 1, Team 2, Score 2	Flash 1, Flash 2	Team box 1, Score box 1, Team box 2, Score box 2, and Middle, a decoration
Countdown	Title, Clock	Timer bar, Warning, Paused, Time up	Panel, <code>static:Status</code> , and Accent and Track, decorations
Ticker	Kicker, Story	none	Panel, Kicker box
End credits	Heading, Credits	none	Panel, Credits box

- **Quiz.** Selected A shows while A is the pick and Locked in once you lock it. If B is right, the reveal shows Correct B, Wrong A, Wrong C and Wrong D. Two to six answers, A to F.
- **Scoreboard.** Flash 1 shows when team 1 gets a point. Add a hidden Full time group and the Full time button shows it. Two to eight teams.
- **Countdown.** The clock is the text drawn as a time, such as 05:00, whatever it is called. Timer bar empties as the clock runs, Warning shows near the end, and Time up at zero.
